We have now added a **title**, *author* and date to our first L^AT_EX document!

In physics, the mass-energy equivalence is stated by the equation $E = mc^2$, discovered in 1905 by Albert Einstein.

The mass-energy equivalence is described by the famous equation

$$E = mc^2$$

discovered in 1905 by Albert Einstein. In natural units ($c = 1$), the formula expresses the identity

$$E = m \tag{1}$$

The universe is immense and it seems to be homogeneous, in a large scale, everywhere we look at.

Figure 1: A galaxy

As you can see above, the universe is really beautiful!
